

Technical Characteristics

Conceived to be installed on concrete parapets, normally on the edge of bridge decks, culverts or overpasses. The railing guarantees a better performance of the barrier in case of collision of a heavy vehicle.

The joint couplings are $\text{Ø}168.3$ mm and 300 mm long with internal tube $\text{Ø}139.7 \times 12.5$ mm thick and are fixed with two bolts M24.

The terminals can be manufactured in different models according to customer's needs.
