Metal parapets

Technical characteristics

To be installed on concrete parapets, recommended for the edges of bridges, culverts and overpasses, and their accesses; and for the central area between two such parallel structures erected 3 metres apart.

The railing guarantees a better performance of the barrier in case of collision of a heavy vehicle.

The tube is $\varnothing 139.7$ mm and 12,5 mm thick.

The terminals can be manufactured in different models according to customer's needs.
